Professional Summary

- Full stack Java developer with experience in design, development, and testing enterprise software
- Understanding and experience with the Software Development Life Cycle (SDLC)
- Expertise in Core Java concepts, such as OOP Design, Multithreading, Collections, Generics, Annotation, Lambda, Stream API and other features in Java 8.
- Experience with managing and maintaining applications on JBoss servers
- Used Maven and Ant as a build automation tool
- Worked with applications that use Apache Struts and JSPs for enterprise web applications
- Experience with front end tools such as Angular, Typescript, HTML, CSS, JavaScript
- Used GIT to manage workflows and collaborations among the internal application projects
- Experience with using Hibernate and Apache torque in Java backend applications
- Configured and managed JBoss and WebLogic servers in VMs running RHEL8
- Worked with MySQL, Mariadb, PostgreSQL, Netezza, and Sybase databases
- Designed and optimized queries for the internal applications by using methods such as normalization, indexing and prepared statements to hinder SQL injections
- Experience using ServiceNow to manage the workflows and issue tickets associated with applications or clients
- Worked on integrating security tools such as Contrast IAST and Veracode Scanners to dynamically and statically scan applications on a recurring basis
- Worked on and managed ec2s and S3 buckets

Technical Skills

- Java, JUnit, JDBC, JSP, Maven, ANT, Spring Hibernate Spring MVC, Spring JPA, Spring Web, Spring Core, Spring Boot, Apache Struts ,Torque, Python
- JBoss, WebLogic and Apache HTTP Server
- C#, .NET, .NET Core, Excel, Word, Outlook
- MySQL, MariaDB, Postgres, Netezza, Sybase
- HTML, CSS, JavaScript, Angular, Typescript
- JSON, YAML, XML
- AWS EC2s and S3

- Using Developer tools like Eclipse, IntelliJ, Visual Studio, VS Code, DbVisualizer, SQL Developer, DBeaver, MobaXterm
- ServiceNow to create or manage tickets and workflows
- Experience the software tools in Splunk
- Experience with GIT to manage internal projects source code
- Organized with tasks, prudent with decisions, communication, and team leadership

Professional Experience

Dunbar Consulting INC   January 2022 – Current
Role: Java Software Engineer

Summary: Dunbar Consulting Inc. has been providing IT-related services to several government agencies, including the SEC. As a contractor for DCI, my contributions were tailored towards providing the necessary maintenance and operational task towards several SEC applications. These applications typically dealt with handling and processing incoming filings (forms 19b-4 and 19-7), internal user access or stock market analysis and reports. Most of these applications are housed within the SEC internal Network. Much of my contract period involved upgrading and maintaining the internal filing applications. Some of the work Included transitioning the application database from Sybase to PostgreSQL, upgrading the JBoss and WebLogic versions, front end changes to the webpages (HTML, CSS, JavaScript, Angular), addressing problem tickets (bugs that need to be resolved in the SEC application) in ServiceNow and addressing

many of these issues by making changes in the backend java code. Finally, I've been involved with weekend work. This usually involves testing and maintenance of our applications during weekend patching.

Responsibilities:

- Addressing the front-end defects discovered by testing, UAT and making the necessary changes to the JSP, HTML, CSS, Angular, or JavaScript files to address the issues
- Upgrading JBoss versions to most recent version to work with the filing applications
- Addressing significant backend issues such as SQL injection, security issues and making the necessary changes in the project source code and creating the necessary feature branch in the related GitLab project.
- optimizing the hibernate system in the filing applications by managing the transactions and the queries involved in the java backend
- Using Gitlab and git to create the necessary features branches, merge other branches, managed project versions
- Address client issues related to the internal SEC filing apps or any other IT related issues
- Completed any database related work (data inserts or updates) that our team needed to manually add to production database as a request via ServiceNow
- Involved in monitoring internal system checks for any application issues
- Monitoring Production logs using Splunk
- Managing AWS EC2s and S3 buckets

Education

Northeastern Illinois University, St Louis Ave, Chicago, IL

Bachelor of Computer Science, December 2020

Overall GPA: 3.6
